

Tools to Check Valid PageRank (PR)

I noticed that Google updated PR once again and this time it is aimed at sites with ‘fake’ PR. It’s pretty fascinating on how you can fake PR by simply pointing it or rather redirecting it to another site that has high PR. You can easily determine whether the site’s PR is faked or not by using these services:

DigPageRank.com

CheckPageRank.net

DigPageRank.com might not be 100% accurate as sometime it might tell you that the PR is valid while other times it might return as faked. I find that CheckPageRank.net is rather more accurate and you get additional info such as the number of backlinks on major search engines such as Google, Yahoo and AllTheWeb.
